

# Roshini Talluru

roshini\_t@outlook.com – (470)-599-5026 – linkedin.com/in/roshinitalluru/ – Texas

## Education

---

**Master of Science - Computer Science**  
University of Oklahoma, Norman, OK

*Aug 2023 - May 2025*

## Work Experience

---

**Cotiviti - (Endeavour Technologies Inc)**  
Software Engineer

*Nov 2025 - present*

Designed cloud-native healthcare microservices, with event driven pipelines, AI-powered developer tooling for 30+ enterprise clients across claims adjudication, appeal processing platforms maintaining >90% test-coverage & < 5% defect-rate.

- Architected Java/SpringBoot microservices & GraphQL APIs with a Kafka event service layer delivering significant throughput & fault isolation across high-volume claim adjudication workflows serving millions of transactions.
- Engineered a custom MCP server integrating Jira, production-log, context feeder AI agents and skills to autonomously drive spec based development at enterprise scale.
- Built AI code review & defect-analysis agents autonomously inspecting SpringBoot logic, GraphQL resolver chains & Angular 16/Typescript components, accelerating PR cycles by 60% while improving defect-fix & RCA efficiency.
- Designed a reusable report-configuration framework for 30+ healthcare clients with dynamic mapping, standardizing validation rules & automating orchestration, eliminating 90% of manual onboarding of new clients.
- Eliminated duplicate-claim revenue leakage by engineering an Angular 16/TS detection workflow integrating REST polling and Kafka event stream consumption to validate live claim status & enforce deduplication.
- Implemented Prometheus metrics instrumentation and Grafana dashboards across 10+ microservices for real-time SLA visibility, proactive alerting, and data-driven performance tuning across all claims-processing pipelines.
- Established test-driven development practices with AI test generation agents, achieving >90% unit & integration test coverage via JUnit 5 & Spring MockMvc, with SonarQube quality gates enforcing a <5% defect rate.
- Standardized Kubernetes and Helm chart deployments with Jenkins CI/CD automated rollback triggers and blue-green strategies, reducing deployment downtime to near-zero for healthcare-critical systems.

**Community Dreams Foundation**  
Software Engineer

*Jul 2025 - Oct 2025*

Developed Java-based financial app to facilitate organization's fund processing, achieving 30% processing overhead reduction.

- Architected Angular 16 micro frontend & containerized Go microservices fund-tracking platform with a reusable UI components and dynamic resource allocations, reducing high traffic sudden disruptions by 80%.
- Implemented MongoDB document funds data with indexed query-optimization to scale of 1+ billion real-time records across 100+ client accounts achieving Api response time of <15 secs through parallel handoffs.
- Designed lazy-loaded Angular module architecture with NgRx state-management & reusable components reducing bundle size & enabling rapid feature iteration through micro front end & AWS ECS to support dynamic scale.

**University of Oklahoma**  
Application Developer

*Aug 2023 - May 2025*

Rebuilt legacy university systems & delivered AI/ML-integrated full-stack platforms driving 40% engagement uplift & 30% performance improvement serving thousands of active users, establishing team-wide AI-augmented engineering practice.

- Drove a 40% raise in user- engagement by designing a personalized recommendation engine with collaborative filtering, Elasticsearch-backed tag navigation & an verification workflow on a React.js knowledge-sharing platform with context-aware content discovery.
- Boosted ISS web application performance by 30% with Angular 16 lazy-loaded modules, OnPush change detection & virtualized list rendering eliminating render-blocking cycles & reducing initial load time across live chat support & interactive dashboards.
- Designed & validated an ML classification pipeline for kidney stone detection using Fuzzy C-means, GLCM feature extraction & DWT, achieving clinically high accuracy & published the Fuzzy methodology to medical research center for clinical adoption.
- Integrated Gemini and GitHub Copilot for AI-assisted LLM test generation, code scaffolding, and establishing team-wide AI-augmented engineering practices across all active projects.
- Implemented Redux/NGRX state management reducing component level data fetching redundancy by 40%.
- Built OAuth 2.0/JWT integrations securing access for 5,000+ student and faculty users with zero security incidents.

**Deloitte**

Software Engineer Analyst

Aug 2022 - Jul 2023

Developed Java 17/Spring Boot microservices with enterprise Angular & Kubernetes-orchestrated deployments across 12 states & 40+ business units & bagged Deloitte’s Game Changer Award for delivery excellence & zero-escalation rollouts.

- Launched Career Compass, a TS/JS platform integrating Credly RESTAPI for real-time skill-credential tracking, milestone dashboards & peer-networking expanding career growth opportunities by 60% for program participants.
- Hardened enterprise access for 40+ business units by architecting a multi-tenant Angular/TS Resource Tracking application with OAuth 2.0 authorization, TOTP 2FA & RBAC policies secured for cross-organizational deployment.
- Built Java/Spring Boot RESTful microservices with PostgreSQL, RabbitMQ event messaging.
- Honored with Deloitte Game Changer Award for driving cross-functional operational optimization and delivering zero-escalation, defect-free software releases across 12 states with measurably improved deployment velocity.

**Talentsprint**

Software Developer

Aug 2021 - May 2022

Delivered full-stack platforms integrating AES-256 encryption, IBM Watson NLP, and Elasticsearch-powered search increasing buyer engagement by 40% and achieving < 100ms API response times.

- Architected an Angular/Java e-commerce platform with an AES-256-encrypted enabling secure financial transactions with IBM Watson for real-time chat, intent-classification & automated query-resolution boosting 40% user-engagement within 60 days.
- Implemented RESTAPIs with JPA/Hibernate, MySQL composite-index query achieving <1 sec response time.
- Developed a Django/Python rental platform with Elasticsearch-backed multi-filter property search & an NLP conversational chatbot using named-entity recognition improving search-to-inquiry conversion & match time by 35%.

|                  |                                                                                               |
|------------------|-----------------------------------------------------------------------------------------------|
| Languages        | Java, Python, Go, C, C++, R                                                                   |
| Web Technologies | React.js, Angular, Vue.js, JavaScript, Typescript, HTML, CSS, SCSS, JSP, JPA, Hibernate.      |
| AI & Agents      | Claude API, MCP Servers, AI agents, LLMs, GitHub Copilot, Context feeder, Prompt Engineering. |
| Cloud & DevOps   | AWS, Azure, Kubernetes, Docker, Jenkins, Apache Kafka, Terraform, Ansible, PCF, Istio.        |
| Databases        | PostgreSQL, MySQL, MongoDB, Oracle, Azure SQL, DynamoDB, Cassandra, Redis, Valkey.            |

**Research Publications**

---

*“Examination Room Guidance system” Third International Conference on Engineering and Advancement in Technology ICEAT IEEE 2022.*

**Awards & Recognition**

---

- Received the Game Changer Award in recognition of outstanding performance at Deloitte.
- Dorothy Grace Barkow scholarship of \$3000 in recognition of academic excellence.
- Oracle certified in “ Advanced Artificial Intelligence with machine learning in Java.”
- Microsoft Certified as Azure AI Engineer Associate.
- Codinza certified in the “Web development using ReactJS and Java” course.
